Internal Automations

Operations Automations

Decision Making

## Application Domains

### Agentic Process Automation

Replacing RPA, Extending RPA, New Processes

### Agentic ETL

Smart Pipes, AI Integration, Smart APIs

### Agentic Native Features

Feature Updates, Premium Features, New Frontier

## Top Verticals

### Financial Services

Market Reports, Tech Automation, Compliance

### Health & Life Sciences

Drug Discovery, Compliance, Sales & Marketing

### Insurance & Casualty

Policy Management, Incident Mgmt, Customer Support

### High Technology

Dev Productivity, New Features, Sales & Marketing

### Media & Entertainment

AI Content, Streaming, Programmatic Ads

### Customer Service

Call Centers, Data Integration, Agentic Support

### Consumer Packaged Goods

Market Mgmt, Pricing Optimization, RPA 2.0

### Consulting & BPO

New Offerings, RPA 2.0, Sales & Marketing

### Cable & Telecom

Customer Support, Sales & Marketing, RPA 2.0

## Top Functional Areas

### Sales & Marketing Automation

Data Management, Pipeline Management, Life Cycle Comms

### Developer Automation

Code Generation, Legacy Code, Documentation

### Cybersecurity & Dev Ops

Threat Detection, Infra Mgmt, Ticket Routing

### Supply Chain & Dev Ops

Route Optimization, Smart Inventory, Digital Twinning

### Pricing & Coupons

Market Research, Smart Processing, AI CRM

### People Management

Training w/ AI, Policy Management, Performance Mgmt

# Let's Review **Cases Studies!**

# Global 500 Financial Institution

Automated report is  
more accurate than  
manual draft

Parts of the process  
takes 15 to 30 minutes  
against 1 week of work

**4X** reduction in time to perform  
overall onboarding KYC (Know  
Your Customer) due diligence

# F500 CPG Company

Reduced the time to  
process refund requests

Replaced a highly manual  
process involving  
multiple teams

from **3 days** down to just  
**10 Minutes**

# Global 1000 Telecom

Analysis of customer  
behavior live across  
many patterns

Start a new line of  
business, offering  
money lending

easier access to money in  
**2 Days from the request**

# Adoption Lifecycle

## Phase I

### AI chatbots

- Single agent
- General purpose
- Common knowledge
- Interactive
- Individual productivity

## Phase II

### AI assistants & copilots

- Single agent (with delegation)
- Domain and company specific
- Proprietary knowledge (RAG)
- Interactive
- Individual productivity

## Phase III

### Agentic workflows

- Collaborative agents
- Process or task specific
- Tool use and memory
- Automated or triggered
- Business productivity

# Adoption Lifecycle

## Easy

to build and run

- Visual editor
- Integrated tools & triggers
- Developer APIs

## Trusted

results you can rely on

- Workflow tracing
- Agent training and guardrails
- LLM testing

## Scalable

across the entire org

- Deployment management
- Monitoring and dashboards
- Roles and permissions

## Finding Applications of AI Agents

*crewai*

 DeepLearning.AI

# Common Success Patterns

- High Frequency
- Consensus on Evaluation Criteria
- Reasonable Fallback Paths
- Measurable Outcomes

**80% to 90%+ Efficiency Gains**

# Understand What You Are Optimizing For

# Case Study

- Initially partnered with us
- First application live within weeks
- Expanded to 3 more use-cases
- Co-developed roadmap for adoption in other business units
- 5 additional use cases in a month
- Expanded across regions

Price Operations use-case for determining discounts and coupons

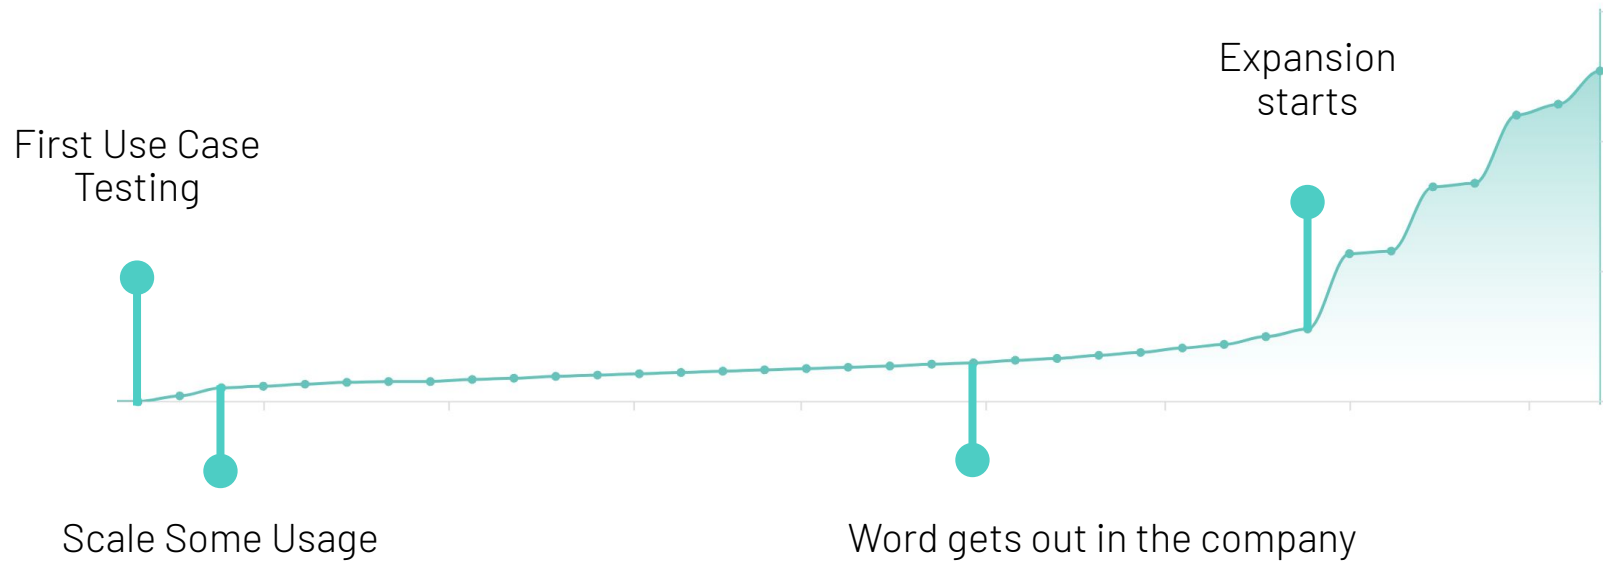

**94%**

**Efficiency Gains**

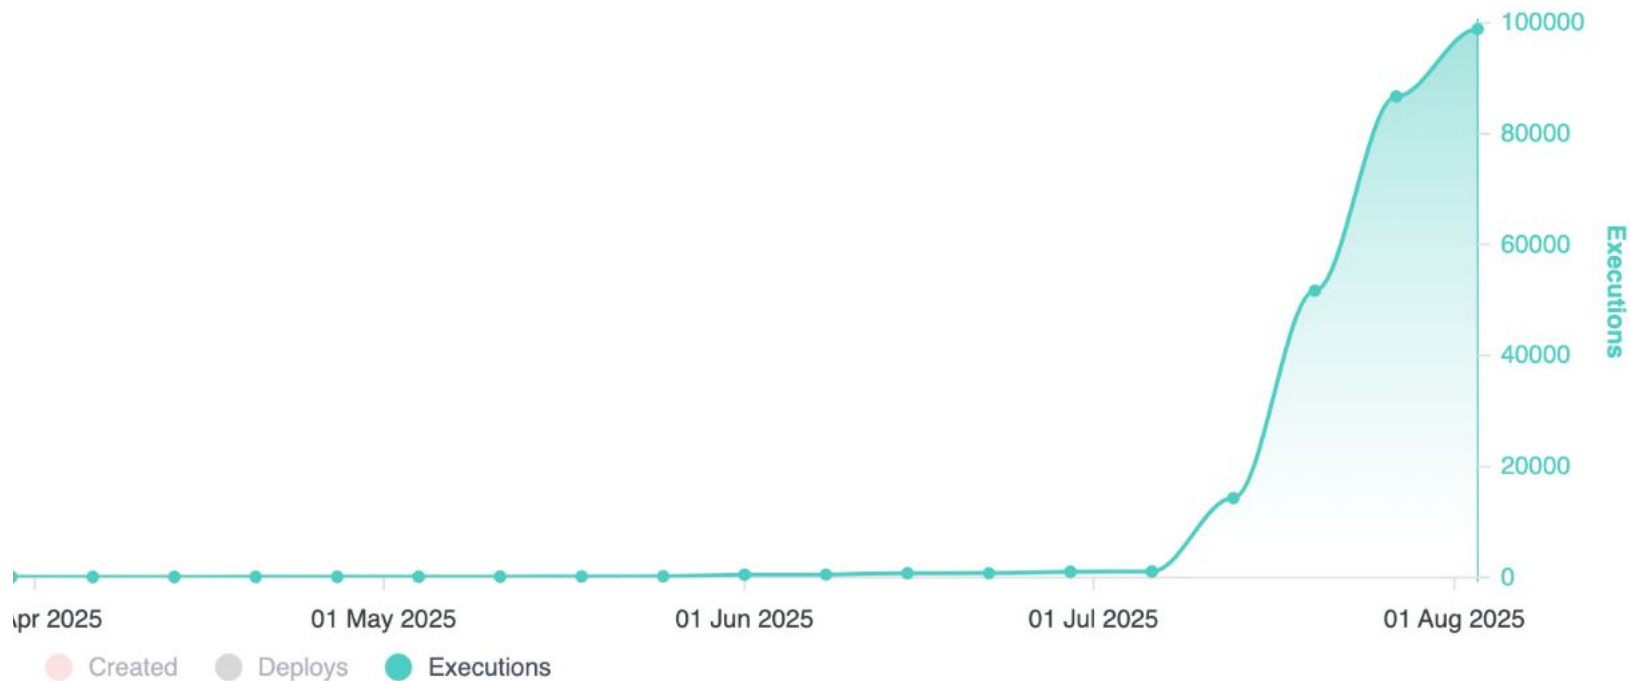

**97%**

**Accuracy**

# Adoption Lifecycle

# Adoption Lifecycle

# Adoption Lifecycle

# Common Failure Modes

- Ill-defined goals
- Lack of observability
- No clarity on evaluation criteria
- No way of tracking proper ROI
- No owner for iteration or QA

# Applying AI Agents in Business

---

Exa

*crewai*

 DeepLearning.AI

# Case Study: Internet Technology

- Search engine built specifically for agentic systems
- Provides official CrewAI integration through EXASearchTool
- Enables agents to access real-time web information with semantic search

# Applying AI Agents in Business

---

Snyk

*crewai*

 DeepLearning.AI

# Case Study: Software Security

- Provides software security platforms that serve the developer community
- Uses CrewAI to help automate security operations in organizations worldwide
- Leading the application of agentic systems for vulnerability tracking, access controls, and incident response

# Applying AI Agents in Business

---

Weaviate

*crewai*

 DeepLearning.AI

# Case Study: Database Technology

- Provides open-source vector databases for AI applications
- Offers CrewAI integration through WeaviateVectorSearchTool
- Allows for storage of both vectors and objects to enable searching and ranking over multi-modal data

# Applying AI Agents in Business

---

AB InBev

*crewai*

 DeepLearning.AI

# Case Study: Consumer Packaged Goods

- The world's largest beverage company with production, distribution, and marketing across the globe
- Early adopter of AI with agentic systems improving products, streamlining operations, and connecting to customers

**Agentic Apps**

**Enterprise Connectors**

**Authentication & Scoping**

**Agentic Observability**

**Agents Orchestration**

**LLMs**

**Data Management**

# Selecting Large Language Models

- Experiment with different LLMs to promote **interoperability** in your agentic systems
- Think ahead to **maintaining and extending** your projects in the future

**Vendor Lock-In**

# Open Source vs Closed Source

## Open Models

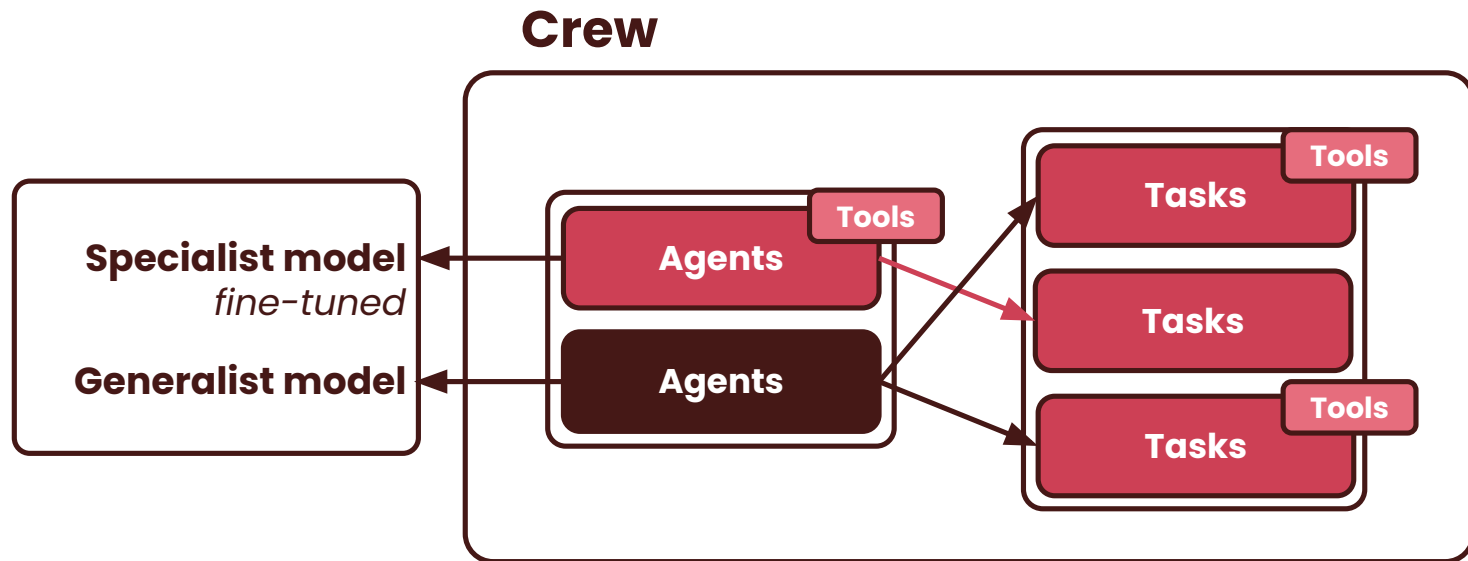

- can be fine-tuned for specific application domains
- can be run locally for privacy protected workflows
- can reduce usage costs and avoid rate limits

# Open Source vs Closed Source

- offer advanced reasoning models for complex tasks
- provide safety and robustness features for predictable behavior
- allow for easy integration through managed services

**Closed Models**

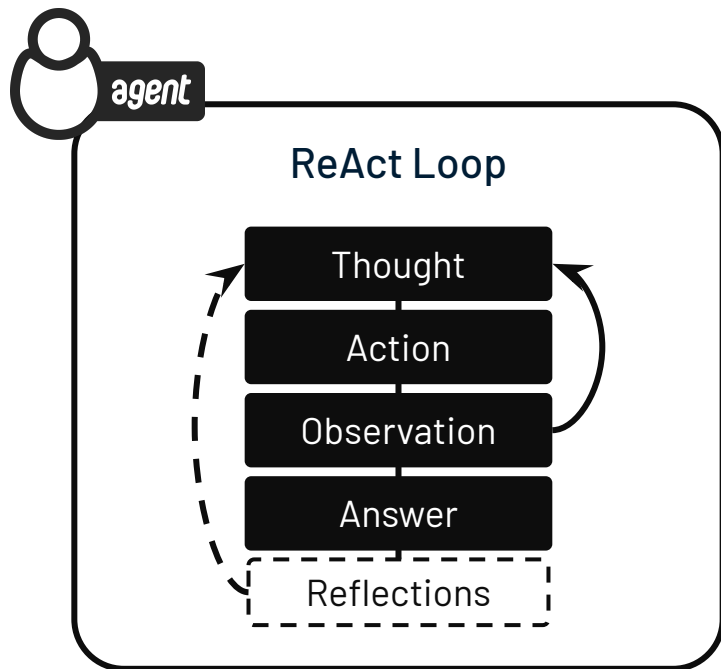

# Fine Tuning

# Background Agents

How can agents handle long horizon tasks by **self-improving** over time?

# Background Agents

How can agents handle long horizon tasks by **self-improving** over time?

## Yesterday's Agents

- Wait idly for instructions
- Execute short horizon tasks for a few minutes
- Forget about their tasks after execution

## Tomorrow's Agents

- Autonomously triggered by events
- Execute long horizon tasks for a few hours
- Store insights from runtime in memory to self-improve performance through reflection

# Don't chase automation
